INTRODUCTION

This report summarizes import interceptions submitted to the Plant Protection Division, Agriculture Canada, for the period April 1, 1989, to March 31, 1990.

The report includes plant pests associated with plants and plant products entering Canada. The Host and Origin lists provide only the organism's name. More complete information is displayed in the Pest List.

Identification is done by staff of the Diagnostic Services with support from the Research Branch of Agriculture Canada. Molluscs are verified at the National Museum of Canada, Ottawa, or by other specialists.

Virus indexing is performed at the Saanichton Plant Quarantine Station in Sidney, British Columbia. Viruses are monitored for several years and reported in the year in which they are detected.

Further information may be obtained from:

Mr. B. Blangez, Head
Diagnostic Services Section

INTRODUCTION

La présente constitue un résumé des renseignements relatifs aux interceptions effectuées à l'importation par la Division de la protection des végétaux du Canada durant la période du 1 avril 1989 au 31 mars 1990.

Ce rapport porte sur les phytoparasites trouvés en relation avec les plantes et les produits végétaux qui entrent au Canada. La Liste des hôtes et la Liste des pays d'origine ne donnent que le nom des ravageurs. Pour de plus amples renseignements, on doit consulter la Liste des ravageurs.

Les identifications sont faites par le personnel professionel de la Section des services diagnostics phytosanitaires avec l'aide de la Direction générale de la recherche d'Agriculture Canada. Les mollusques sont vérifiés au moyen des collections des Musées nationaux du Canada à Ottawa, avec l'aide d'autres spécialistes.

L'indexage des virus est effectué à la Station de quarantaine des plantes de Saanichton à Sidney en Colombie-Britannique. Les virus font l'objet d'une surveillance pendant plusieurs années et sont signalés l'année au cours de laquelle leur présence est observée.

Pour de plus amples renseignements, veuillez vous adresser à:
